

Htet Aung Khaing'

Network Engineer

Career Objective

✚ To obtain a challenging Network Engineer position where I can utilize my expertise in routing, switching, and network security to design, implement, and maintain reliable enterprise network infrastructures. With hands-on experience in LAN/WAN/WLAN technologies, multi-vendor networking platforms, and proactive network monitoring, I aim to enhance network performance, ensure system reliability, and contribute to the development of secure and scalable IT environments while continuously expanding my technical expertise.

Contact

- htetaungkhaingit777@gmail.com
- +959984472801 (Whatsapp)
- 9 Ward, Tharkayta, Yangon

Education

- 2016 – 2019
- Bachelor of Science (B.Sc.) in Geology**
- Pyay University, Myanmar

Languages

- English

Notice Period

- One Month

Soft Skills

- Analytical & Critical Thinking
- Advanced Troubleshooting
- Incident Prioritization & Time Management
- Strong Communication Skills
- Team Collaboration
- Problem-Solving Under Pressure
- Attention to Detail
- Adaptability

WORK EXPERIENCES

NINJAVAN MYANMAR

DEC 2024 – PRESENT

IT OFFICER

Core Responsibilities

- **Network Architecture Design:** Designed and implemented scalable LAN/WAN/WLAN infrastructures for enterprise environments to support reliable and high-performance connectivity.
- **Network Segmentation & Traffic Optimization:** Implemented VLAN segmentation and Quality of Service (QoS) policies to enhance traffic management, network efficiency, and service reliability.
- **Network Monitoring & Performance Management:** Monitored network traffic and system performance using network monitoring tools to identify security risks and optimize network operations.
- **High Availability Support:** Maintained and supported Ninja Van call center network infrastructure, ensuring zero downtime and uninterrupted communication services.
- **Branch Network Administration:** Managed and controlled network connectivity across Ninja Van branches and stations, ensuring stable inter-branch communication and operational continuity.
- **Incident Troubleshooting:** Diagnosed and resolved network issues related to routing, switching, and connectivity to minimize service disruptions.
- **Technical Documentation:** Maintained accurate network documentation including topology diagrams, configurations, and operational procedures for efficient network management and future scalability.
- **Routing & Switching Configuration:** Configured and optimized routing and switching protocols to support efficient data communication across the network.
- **Security Implementation:** Applied network security best practices including firewall rules, access control policies, and network segmentation to protect critical infrastructure.

Expertise

Routing & Network Protocols

- OSPF, BGP, RIP, EIGRP
- MPLS Networking
- Static & Dynamic Routing
- Route Redistribution & Traffic Engineering

Switching & Layer 2 Technologies

- VLAN, Inter-VLAN Routing
- Trunking (802.1Q)
- Spanning Tree Protocol (STP/RSTP/MSTP)
- Link Aggregation / EtherChannel
- Switching Infrastructure Design

Network Hardware & Platforms

- Routers, Switches, Firewalls
- Wireless Access Points & Controllers
- Multi-vendor Platforms: Cisco, MikroTik, Ruijie, UniFi, TP-Link Omada

Network Infrastructure & Connectivity

- LAN / WAN / WLAN Architecture
- Enterprise Network Deployment
- Branch Network Connectivity
- Structured Cabling & Network Topology Design

Network Monitoring & Troubleshooting Tools

- Wireshark (Packet Analysis)
- Cisco Packet Tracer
- PuTTY / SSH Remote Access
- Network Performance Monitoring

Network Security

- Firewall Configuration & Policy Management
- Network Access Control (NAC)
- Intrusion Detection & Threat Monitoring
- Secure Network Communication

Operational & Technical Skills

- Network Troubleshooting & Incident Resolution
- Network Documentation & Topology Mapping
- Cable Management & Infrastructure Organization
- System Configuration & Maintenance

Certifications

- Cisco Certified Network Associate (CCNA) – **Cisco Systems**
- Cisco Certified Network Professional (CCNP) – **In Progress – Cisco Systems**
- MikroTik Certified Network Associate (MTCNA) – **MikroTik**
- Ruijie Certified Engineer – **Ruijie Networks**
- CompTIA A+ – **CompTIA**

ARAO COMPANY LIMITED

SEP 2023– DEC 2024

IT SUPPORT

Core Responsibilities

- **Hardware & Software Installation:** Installed and configured computer hardware, operating systems, and business software to ensure reliable workstation performance.
- **Network Device Configuration:** Deployed and configured networking equipment including routers, switches, and wireless access points using Cisco, MikroTik, Ruijie, and TP-Link Omada platforms.
- **Email System Support:** Configured Microsoft Outlook for users, including email account setup, data migration, and backup management.
- **Operating System Deployment:** Performed Windows installation, configuration, and system updates to maintain stable and secure workstation environments.
- **Security & Access Control Systems:** Installed and maintained biometric fingerprint systems (BioStar) to support secure access control and attendance management.
- **CCTV System Deployment:** Implemented and configured CCTV surveillance systems to enhance physical security monitoring.
- **Peripheral Device Management:** Installed and supported peripheral devices including scanners, printers, and other office equipment.

KEY ACHIEVEMENTS

Network Performance Improvement

- **Network Downtime Reduction:** Improved network stability by quickly identifying and resolving critical network issues, minimizing service disruptions.
- **Network Performance Optimization:** Enhanced overall network efficiency by optimizing configurations and improving bandwidth utilization.

Operational Efficiency

- **Operational Process Improvement:** Streamlined network operations by implementing better configuration management and maintenance practices.
- **Infrastructure Reliability:** Strengthened network reliability through proactive monitoring and timely troubleshooting of connectivity issues.

Service Availability

- **Service Continuity Support:** Maintained stable network services to support business operations and ensure uninterrupted connectivity.

Documentation & Technical Management

- **Technical Documentation:** Maintained detailed network documentation including configurations, topology diagrams, and operational procedures.
- **Operational Knowledge Sharing:** Provided technical guidance and documentation to support efficient network maintenance and troubleshooting.
